# EQ-i 2.0 Model of Emotional Intelligence

#### **SELF-PERCEPTION**

Self-Regard is respecting oneself while understanding and accepting one's strengths and weaknesses. Self-Regard is often associated with feelings of inner strength and self-confidence.

**Self-Actualization** is the willingness to persistently try to improve oneself and engage in the pursuit of personally relevant and meaningful objectives that lead to a rich and enjoyable life.

Emotional Self-Awareness includes recognizing and understanding one's own emotions. This includes the ability to differentiate between subtleties in one's own emotions while understanding the cause of these emotions and the impact they have on one's own thoughts and actions and those of others.

### STRESS MANAGEMENT

Flexibility is adapting emotions, thoughts and behaviors to unfamiliar, unpredictable, and dynamic circumstances or ideas.

#### **Stress Tolerance**

involves coping with stressful or difficult situations and believing that one can manage or influence situations in a positive manner.

**Optimism** is an indicator of one's positive attitude and outlook on life. It involves remaining hopeful and resilient, despite occasional setbacks.

#### SELF-EXPRESSION

#### **Emotional Expression**

is openly expressing one's feelings verbally and non-verbally.

#### **Assertiveness**

involves communicating feelings, beliefs and thoughts openly, and defending personal rights and values in a socially acceptable, non-offensive, and non-destructive manner.

**Independence** is the ability to be self directed and free from emotional dependency on others. Decision-making, planning, and daily tasks are completed autonomously.

### **DECISION MAKING**

Problem Solving is the ability to find solutions to problems in situations where emotions are involved. Problem solving includes the ability to understand how emotions impact decision making.

**Reality Testing** is the capacity to remain objective by seeing things as they really are. This capacity involves recognizing when emotions or personal bias can cause one to be less objective.

Impulse Control is the ability to resist or delay an impulse, drive or temptation to act and involves avoiding rash behaviors and decision making.

#### INTERPERSONAL

**Interpersonal Relationships** refers to the skill of developing and maintaining mutually satisfying relationships that are characterized by trust and compassion.

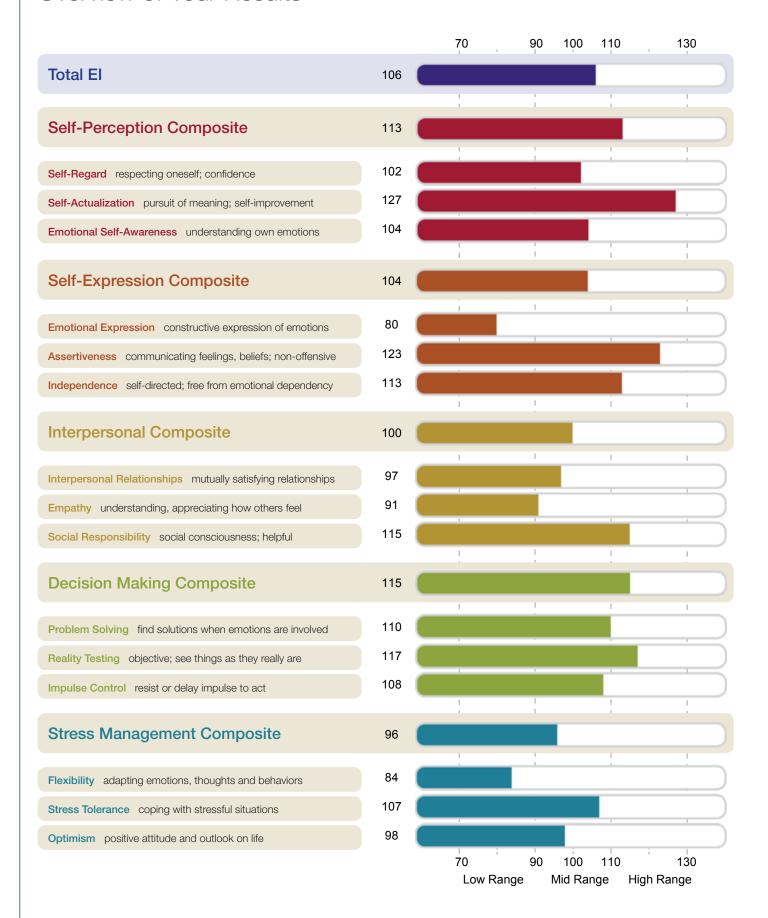

**Empathy** is recognizing, understanding, and appreciating how other people feel. Empathy involves being able to articulate your understanding of another's perspective and behaving in a way that respects others' feelings.

Social Responsibility is willingly contributing to society, to one's social groups, and generally to the welfare of others. Social Responsibility involves acting responsibly, having social consciousness, and showing concern for the greater community.

### Overview of Your Results

# Self-Regard

Self-Regard respecting oneself; confidence

### What Your Score Means

Individuals with self-regard respect themselves and accept both personal strengths and limitations while remaining satisfied and self-secure. Lisa, your result suggests that you do have a good sense of your own strengths and weaknesses without being overly confident. At times you may experience lower self-confidence; however, you approach most challenges with self-assuredness and a can-do attitude. You may have:

- a reasonable level of respect for yourself, your talents, and your weaknesses.
- a willingness to openly admit mistakes or unfamiliarity with a situation.
- a well-developed sense of identity—you know what you are good at.

### **Impact at Work**

**Emotional Implications.** The emotional implications of self-regard extend further than many people realize. The implications from your result suggest that you are driven to achieve your fullest potential, you show a more positive outlook on your capabilities, and you are likely more confident in expressing yourself than those individuals with lower self-regard.

**Social and Behavioral Implications.** Your self-respect and understanding of your strengths and weaknesses is often perceived by others as confidence in your approach to work. Your feelings of inner strength and self-confidence are evident in the way you conduct yourself and interact with others. You are likely to maintain eye contact, make use of body language that is engaging, and use a tone of voice that is welcoming but deliberate and decisive where appropriate. Like a majority of other people, you still have moments where your self-regard waivers, and care should be taken that you continue to leverage opportunities to showcase your talents and overcome weaknesses.

### **Strategies for Action**

**Self-Regard Profile.** Seeking others' feedback on your strengths and weaknesses demonstrates a willingness to learn and gives you insight to reveal hidden talents.

- Identify those at work (colleague, manager) who know you well enough to comment on your strengths and weaknesses.
- Ask them to list your strengths and weaknesses with specific observations or examples.
- Without looking at their list, write what you believe your strengths and weaknesses are. Then compare lists. Look for disconnects and similarities between lists. Identify opportunities to repeat the positive examples provided in your feedback.

*Healthy Self-Doubt.* To strengthen Self-Regard it is important to recognize the difference between healthy and unhealthy self-doubt.

- Healthy self-doubt results from knowing and accepting an area of weakness. For example, you are nervous giving presentations and you know this needs improvement.
- Unhealthy self-doubt results from negative self-talk; there is no evidence that you will do poorly, yet you are convinced
  you will fail.
- Unhealthy self-doubt prevents you from having stronger Self-Regard. Reflect on what triggers negative self-talk (e.g., stress, feelings of intimidation) and prove it wrong through your actions.

### Balancing Your El

This section compares Self-Regard with Self-Actualization, Problem Solving, and Reality Testing. The subscale that differs the most from Self-Regard is Self-Actualization. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

### Self-Regard(102) Self-Actualization(127)

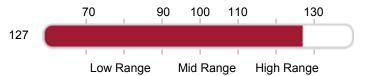

Your Self-Regard is lower than your Self-Actualization. These components can be aligned by evaluating self-worth in terms of concrete achievements. When appropriate, take time to recognize successes and how they reflect upon your abilities. Finally, ensure that you are considering your strengths and growth opportunities when determining which activities you should pursue.

# Self-Actualization

Self-Actualization pursuit of meaning; self-improvement

### What Your Score Means

Self-actualization can be summed up in three words: pursuit of meaning. While this may sound philosophical, in the business world it means finding purpose and enjoyment in your job and performing to your fullest potential. Lisa, your result suggests that you find deep meaning in your work, set challenging goals and expect the same level of engagement from others. In addition to the passion you bring to your job, your result may also mean that:

- you appear to be working or acting with a plan in mind.
- you continually hone your trade/skills and expect the same growth from colleagues.
- you are not usually satisfied with the status quo.
- you should consider whether your goals are too easy to meet. They should be sufficiently challenging and contribute to your growth both inside and outside of work.

### **Impact at Work**

Emotional Implications. Your success and satisfaction with your life can probably be traced back to you doing what you enjoy in both your work and personal life. Because you have found ways to apply your talents and strengths, you likely experience harmony knowing that your talents are being put to good use and should a setback occur, you can bounce back quickly knowing there is a greater purpose behind your actions.

Social and Behavioral Implications. Behaviorally, people who are self-actualized are committed to the ongoing development of their talents and abilities by engaging in daily activities that are purposefully tied to meaningful goals. Your passion and lack of acceptance of the status quo drive you to seek out new challenges and approaches to decision making and problem solving. Although being self-actualized is a tremendous strength, people may have a tendency to expect that you have all the answers. Particularly if you are in a leadership position, continue to make the effort to engage those around you by asking reflective questions and sharing ideas.

### **Strategies for Action**

Spread the Word. Imagine the progress your organization would experience if everyone was just a little more passionate about their jobs! Obviously you can't force people to become self-actualized, but you can put your enthusiasm on stage for others to take notice and hopefully join in.

 Start something new at work that is in line with your interests and brings people together. For example, find some colleagues to join a professional organization, attend a conference (even better, be on a panel at a conference), try a new training course, start up a lunch 'n' learn, or invite people to form a corporate fundraising team for a local charity.

Great Expectations. Your high self-actualization means that you could unrealistically apply the same high achieving expectations to your colleagues or family.

■ Examine the performance expectations you have for others. Have you "topped up" the level of performance you expect beyond what's adequate for successful job performance? For example, if you spend 10 hours at work, do you unfairly judge someone who only works the required 8 hours as less committed to their job?

### Balancing Your El

This section compares Self-Actualization with Self-Regard, Optimism, and Reality Testing. The subscale that differs the most from Self-Actualization is Optimism. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

### Self-Actualization(127) **○** Optimism(98)

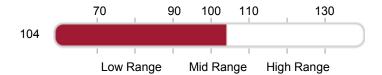

Your Self-Actualization result is higher than your Optimism result. These components can be better balanced by taking the time to recognize and celebrate successes. This approach is a good way to stay focused on positive results and become more optimistic toward future endeavors.

# **Emotional Self-Awareness**

Emotional Self-Awareness understanding own emotions

### What Your Score Means

If you have a solid understanding of what causes your emotions, it is much easier to regulate your behavior and control the impact your emotions have on those you work with. Lisa, your result indicates that you are in touch with your emotions and that you manage them in a way that is healthy for you and your relationships at work. It is likely that you:

- have a solid read of your inner self—you can describe and manage the emotions you are experiencing.
- are aware of how emotions impact team morale, collaborative relationships, and individual performance.
- still have a few emotions that make you uneasy or are difficult to fully understand.

#### **Impact at Work**

Emotional Implications. One of the implications of recognizing your emotions and their triggers is that for you, experiencing an emotion is the result of a cause-and-effect relationship. You know when and why an emotion will be triggered and you know how to use that emotion to your benefit. You are usually in tune with the physiological sensations of emotion, but there may be some emotions that continue to slip by unrecognized.

Social and Behavioral Implications. Your level of Emotional Self-Awareness indicates that more often than not, you feel comfortable expressing your understanding of your thoughts and ideas to your colleagues and, moreover, you know how your emotions can increase individual and team morale. Your colleagues likely understand your stance and value your openness when it comes to how you are feeling. There may still be some circumstances at work that cause you to be unsure of your emotions. You could benefit from a bit more investigation into what triggered your feelings in these cases, and what subsequent action needs to be taken.

### **Strategies for Action**

Cause and Effect. Your strength in identifying a cause-and-effect relationship for your own emotions can be leveraged to predict others' emotional reactions.

- The next time you are in a meeting ask others, "How do you feel about this direction?" or "What is your gut telling you about this decision?"
- Identify the causes of your colleagues' emotions and how their emotions impact their buy-in to a decision. This will help not only to show that you care about others' feelings (empathy), but to give you the information you need to predict how colleagues will react in the future.

Leveraging Emotions. Although you understand emotions quite well, you can always work on refining your ability to adopt the right emotion at the right time. People with strong emotional self-awareness are able to bring on emotions in themselves that will help them with the task at hand.

■ Experiment with different techniques and mediums to make you feel a wide range of emotions (e.g., somber, happy, angry, creative, or peaceful). Putting yourself in a slightly somber mood can help you focus on analytical tasks, while being happy will help you with brainstorming or creative tasks.

### Balancing Your El

This section compares Emotional Self-Awareness with Reality Testing, Emotional Expression, and Stress Tolerance. The subscale that differs the most from Emotional Self-Awareness is Emotional Expression. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

Emotional Self-Awareness(104) Emotional Expression(80)

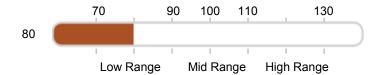

Your Emotional Self-Awareness is higher than your Emotional Expression. You may expect others to be aware of how you are feeling, so make sure you are clearly communicating your feelings to them. Remember, expression is the way you showcase your emotional knowledge and it will have greater impact if it works in parallel with your awareness.

# **Emotional Expression**

**Emotional Expression** constructive expression of emotions

### What Your Score Means

Individuals who effectively express emotions use words and physical expressions to convey their feelings in a way that is not hurtful to others. Lisa, your result indicates you have difficulty bringing emotions to the surface and sharing your true feelings with coworkers. You may appear emotionally detached from your colleagues, probably showing as little variation in your demeanor as possible. Consider the following characteristics of your result:

- certain emotions, if not most, are uncomfortable for you to express either through words, facial expressions, or body language.
- you use a limited emotional vocabulary to describe your feelings (e.g., happy and sad versus elated and somber).
- you assume people know how you feel so you don't display it through your words or actions.

### **Impact at Work**

Emotional Implications. Think of Emotional Expression as the action part of the emotional experience. You tend to bottle emotions inside and not share them with others. This can create the illusion that you are either emotionless or that you do not grasp the significance of the situation.

Social and Behavioral Implications. Expressing one's feelings verbally and nonverbally is key to forming effective relationships. Your less expressive style may mean that in new environments you could struggle to engage others in a meaningful way. People can easily misperceive you as being withdrawn and as a result it may be hard for you to inspire others or gain the support you need. While you may feel comfortable remaining in a predictable, pokerfaced state, it is actually stressful for others when they need to share information with you. If you do not reflect your emotions, you may miss crucial information because others feel uncomfortable being open and honest with you.

### **Strategies for Action**

Getting Rid of the Group Hug. At work, sharing your emotions shouldn't be a single organized event like the infamous group hug. Think about emotions as drivers of performance, like any other resource you draw upon to get your job done.

- Start small—try expressing what you feel in an email. Take time to find words that really describe how you feel. Praise a team member on his work, express your gratitude for someone's help, or voice your concern over deadlines.
- Once this becomes comfortable for you, start expressing yourself where appropriate in small conversations. Draw on the same emotional vocabulary you used in your emails.

Get it Out in Writing. If you find yourself dwelling on a particular feeling but not expressing it, begin to write an email to a friend. You will not send this email, so don't worry about who would receive it.

- Just start writing—this in itself can be a healing process. Describe the details of what happened, what exactly you are feeling and why.
- Although it is in written form, you have just completed the process of emotional expression. Take one small section of your email and appropriately talk it over with those involved. Take the email with you to refer to your notes and emotional language.

### Balancing Your El

This section compares Emotional Expression with Interpersonal Relationships, Assertiveness, and Empathy, The subscale that differs the most from Emotional Expression is Assertiveness. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

#### Emotional Expression(80) <a> Assertiveness(123)</a>

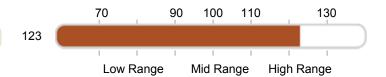

Your Emotional Expression is lower than Assertiveness. People tend to be most cooperative when they are aware of your underlying motives and concerns. When these two facets are balanced, and Emotional Expression is used effectively, there is a better understanding of both the issues and feelings involved, and the resolutions tend to be more effective overall.

# Assertiveness

Assertiveness communicating feelings, beliefs; non-offensive

### What Your Score Means

Picture a line between the words passive and aggressive. At the middle point of this line lies assertiveness, a place where you work with others by finding the right words at the right time to express your feelings and thoughts. Lisa, your results indicate you operate at the assertiveness midpoint of this line almost all of the time, articulating your thoughts in a clear and confident way. Some of the following characteristics may apply to you:

- you are firm and direct whenever necessary.
- you achieve your goals by articulating your needs and protecting your resources.
- you view your rights and those of others as sacred; you stand up for yourself and others.

### **Impact at Work**

Emotional Implications. You have a solid understanding of what is worth standing up for, and you likely pull on strong emotions and convictions to state your position. While this is a crucial skill to have, watch that when you defend your position you do not miss important information or feedback that may alter your perspective. While some situations call for a definitive stance (e.g., addressing a safety violation), others may require you to be more flexible in your thinking.

Social and Behavioral Implications. Your level of assertiveness suggests that you have the knack for finding the right words at the right time to get your point across in a clear and confident manner. As a result your team may see you proactively dealing with conflict, leveraging organizational resources and openly voicing your opinion or feedback on the matters at hand. You must remain aware of the distinction between assertiveness and aggressiveness and how the work context determines which type of person you are seen as. Becoming overconfident in your ability or being too rigid in defending your position may result in unproductive, stubborn, or aggressive behavior.

### **Strategies for Action**

Identify Cave Points. Determining your cave points allows you to demonstrate your flexibility by setting a point where you have enough information to change your stance on an issue.

- Before entering a discussion or a meeting, determine what you need to hear from others for you to concede on your position. For example, you strongly want a spring launch date for a new product, but others are insisting the winter would be best. What evidence or data do they need to present to you that will convince you to surrender your position?
- Highly assertive people need to know this cave point ahead of time in order to allow the team to move toward a decision and not become paralyzed in rigid debate.

Crossing the Aggression Line. Because of your strong result in assertiveness, you need to be particularly cautious that your behavior doesn't harm your relationships.

■ Set up a few rules for yourself (or for the whole team) that you will follow when your behavior starts to cross the line into aggression. For example, interrupting others in a meeting is a sign that you are no longer being respectful. If this happens, a rule could be "Openly apologize to the interrupted person and be silent until it is your time to speak."

### Balancing Your El

This section compares Assertiveness with Interpersonal Relationships, Emotional Self-Awareness, and Empathy, The subscale that differs the most from Assertiveness is Empathy. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

Assertiveness(123) Empathy(91)

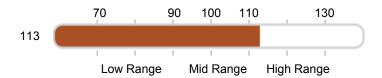

Your Assertiveness is higher than your Empathy. Where possible, focus on collaboration in meetings. You should strive to appropriately assert your views, but show an equal willingness to listen to others and be willing to agree when possible.

# Independence

**Independence** self-directed: free from emotional dependency

### What Your Score Means

Lisa, being independent means you are capable of feeling, thinking, and working on your own. Your results show that this is a welldeveloped skill, as you are more than willing and capable of pursuing your own ideas and course of action. You are more likely than most to be decisive, directive, and accountable for the responsibility associated with making decisions. Consider the following interpretation of your results:

- you are comfortable making decisions on your own.
- you can work without direction or reassurance from others.
- you accept responsibility for your decisions knowing that at times people will disagree with you.

### **Impact at Work**

Emotional Implications. Your tendency to act and think on your own positions you to showcase your strengths in other areas of EI. Your strong Independence result also means that your emotions are freely expressed; you don't need reassurance or a group consensus to say what you feel. Remember that it is okay to reach out for help when you need it; always working alone can make you appear arrogant and alienating.

Social and Behavioral Implications. Your level of Independence indicates that you rarely depend on others to make important decisions. Because you are self-directed, you can analyze a situation on your own, formulate a response, and move into implementation mode without second quessing your decisions or looking for approval. This independent approach shows initiative, and in autonomous roles allows you to take responsibility for your actions when direction is limited. Due to your high level of independence, you must be cautious not to neglect the emotions and opinions of your colleagues. Keep a close eye on how often you go off in your own direction, rather than building coalitions.

### **Strategies for Action**

Independence Check. Not every situation requires you to act autonomously, although it may be your preferred approach to accomplishing your goals. Here are three questions you should ask yourself before making a decision independently:

- Am I missing subject matter expertise to make an informed decision?
- Am I hurting collaborative relationships by making this decision on my own?
- Does my decision have implications for those I work with? Would their input help me predict these implications?

Securing Buy-In. Effective, independent professionals don't march off in their own direction hoping that others follow; they balance self-directed thought with the ability to secure buy-in and support from key relationships.

- Examine past decisions that were not well supported by your colleagues. What did your decision-making process look like? Where might securing buy-in have broken down?
- Brainstorm ways that you can involve others in your decision-making process. The ultimate decision or plan may rest with you, but it will be easier to gain support when others feel empowered throughout the decision-making process.

### Balancing Your El

This section compares Independence with Problem Solving, Emotional Self-Awareness, and Interpersonal Relationships, The subscale that differs the most from Independence is Interpersonal Relationships. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

Independence(113) ≥ Interpersonal Relationships(97)

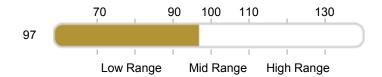

Your Independence is higher than your Interpersonal Relationships result. Balancing these components means spending time and effort nurturing relationships, but not being overly reliant on them. Draw on the expertise of others when appropriate. Collaboration can help establish positive relationships.

# Interpersonal Relationships

Interpersonal Relationships mutually satisfying relationships

### What Your Score Means

Lisa, this subscale is about developing and maintaining mutually satisfying relationships and your result suggests that generally you handle most social interactions well and with confidence. Being a contributing member of a team is something you value and you usually work toward creating relationships that support mutual goals. However, when relationships require maintenance, you may avoid putting in the required effort, preferring to work on your own instead. Some characteristics of your result are:

- you generally seek out new relationships, yet continue to take care of the ones you have.
- you understand how others can help you, as well as how you can help them.
- in unfamiliar or uncomfortable situations, you may be more hesitant to socialize.

#### **Impact at Work**

**Emotional Implications.** While you value the relationships you have, you could use your relationship-building skills to connect with a more diverse group (e.g., different jobs, levels of seniority). If you only forge relationships with people you are comfortable with, you may not receive well-balanced support, especially if your closest colleagues are similar to you and will likely not offer a differing point of view.

**Social and Behavioral Implications.** Your result suggests that although your relationships are not always perfect, you are usually willing to be open, trustworthy, and compassionate. You likely have people resources in place for when you need them, like in times of stress or when you're short on time. Although you appreciate the relationships you have, be aware that maintaining them requires hard work and this usually isn't written in your job description. Continue to balance your job requirements with relationship maintenance, recognizing that going outside of your job description to help someone out can have immeasurable returns.

### **Strategies for Action**

**Step Outside Your Comfort Zone.** Building resilient and trusting relationships with all types of people, whether you "like" them or not, is crucial to your success.

- Identify someone (colleague, manager, or customer) whose relationship with you is ineffective. Pick someone with whom if you had a stronger relationship you would be better able to reach your objectives.
- What have you done to earn this person's trust and their willingness to help you? Leverage your empathy to see things from his/her perspective. List what you think this person needs from you.
- Meet with this person to confirm your perspective. Emphasize the importance of understanding mutual needs and arrive at an action plan to support one another.

**Recognition Goes a Long Way.** Remember to celebrate events that are important to your coworkers, but also express recognition on a regular basis. Instances may include birthdays, promotions, or recognition for a job well done.

- Do you know what kind of recognition your coworkers prefer? Not everyone likes "Happy Birthday" sung at their desk or a reward given in front of their peers.
- Leverage empathy skills to determine what type of recognition motivates and is appreciated by each of your coworkers.

### Balancing Your El

This section compares Interpersonal Relationships with Self-Actualization, Problem Solving, and Independence. The subscale that differs the most from Interpersonal Relationships is Self-Actualization. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

Interpersonal Relationships(97) Self-Actualization(127)

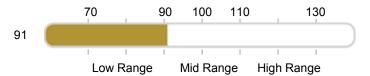

Your Interpersonal Relationships result is lower than your Self-Actualization result. When these components are balanced, you invest time and effort into pursuing your own personal goals, while at the same time fostering meaningful relationships with others. Developing your interpersonal relationships has many benefits. In fact, significant people in your life often play an integral role in helping you reach goals that you may not have been able to achieve on your own.

**■ MHS** 

# **Empathy**

**Empathy** understanding, appreciating how others feel

### What Your Score Means

Empathy, the ability to recognize, understand, and appreciate the way others feel, is a crucial El skill at the heart of all effective work relationships. Lisa, your result indicates that you are generally an empathic person who is able to grasp what another is feeling, even if it is much different from what you feel. Your empathic nature makes you an approachable and open team member with whom coworkers feel safe sharing thoughts and ideas. With a result such as yours you may find:

- you are "tuned in" to how others are feeling.
- you care about the thoughts and feelings of others as much as you do your own.
- under times of stress or moments of defensiveness, you are likely to adopt a less empathic approach, possibly arguing your position without considering the needs of others.

### **Impact at Work**

*Emotional Implications*. Your result in Empathy provides a solid foundation for all other interpersonal skill areas. You draw on your ability to respect others so that your interactions with others appear sincere. Still, certain emotions may cause your normally empathetic demeanor to crack. Anger, for example, may get the best of you, causing you to become critical instead of your typical caring and respectful self.

**Social and Behavioral Implications.** Generally speaking, your ability to perceive and understand other people's emotions suggests that caring for others is built into the process of achieving your day-to-day tasks. For you, empathy is an active process that is inherent in the way you make decisions, resolve conflict, manage change, and work as a contributing team member. Often this results in others reciprocating their thoughts and emotions. Your ability to demonstrate empathy where appropriate will go a long way toward fostering your interpersonal relationships.

### **Strategies for Action**

Be Prepared. Prior to your next meeting, prepare by:

- Listing all attendees and what needs and expectations each brings to the meeting
- Predicting how they will act during the meeting. What issues do you need to be sensitive towards?
- Generating a number of questions to further understand your colleagues' needs during the meeting. You may not be able to resolve conflicting needs, but these engaging questions will help show your interest and compassion for others' situations and needs.

**Connecting on a Personal Level.** If you know colleagues on a personal level you will better understand what impacts their emotions and be in a better position to see situations from their perspective.

- With some of your lesser known colleagues, take the time to connect with them on topics outside of their field of work (e.g., children, sports, current events, traveling).
- With the next situation that calls for empathy on your part, draw upon this background information to show your sensitivity to their needs (e.g., "You must really be feeling stressed with two sick kids at home and I know your wife is away at that conference. How can I help?").

### Balancing Your El

This section compares Empathy with Emotional Self-Awareness, Reality Testing, and Emotional Expression. The subscale that differs the most from Empathy is Reality Testing. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

### Empathy(91) Reality Testing(117)

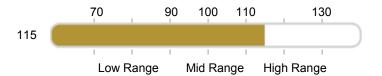

Your Empathy is lower than your Reality Testing. The ability to remain objective and unbiased should be balanced by embracing the emotional tone of a situation. Being overly detached may mean missing social nuances or emotional changes in others that can inhibit a positive resolution in some situations.

# Social Responsibility

Social Responsibility social consciousness: helpful

### What Your Score Means

Social responsibility is that moral compass directing your behavior toward promoting the greater good and contributing to society and one's social groups. Lisa, your result suggests that you are highly altruistic in your efforts, taking most, if not all, opportunities to help others. Your concern for societal issues is demonstrated through the selfless contributions you make, both at work and in your community. Based on your result, you:

- consistently demonstrate your social conscience and are compelled to help others.
- are seen as a "Good Samaritan" who helps out without expecting anything in return.
- gain fulfillment from a variety of sources, including those activities outside of work.

### **Impact at Work**

Emotional Implications. You are able to keep your emotions in perspective, having observed firsthand the difficulties others are facing. Also, because you contribute to a wide variety of activities, your emotions are not tied to one source. For example, if you have a setback in one area (e.g., loss of a key client account), you can look to another area for relief (e.g., coaching basketball).

Social and Behavioral Implications. Overall, you appear to be a cooperative and constructive member of your organization who acts in support of the common good. It is not uncommon to see someone with this level of Social Responsibility involved in a variety of social and leadership pursuits both inside and outside of the workplace. A potentially problematic implication of such involvement is that you may take on too many responsibilities, regardless of the cost to the quality of your work or your personal well-being. Be mindful that you don't engage in helping others as an escape from things that need to be fixed in your own life.

### **Strategies for Action**

The Best Intentions. Check in with yourself to ensure that you are not avoiding your current emotional state by focusing solely on helping others.

- Ask someone close to you (e.g., family or close friends) to describe what your intentions to help look like from their perspective. Others may be able to see the real motives behind even the best intentions.
- If you are overly involved to the point that your personal well-being is neglected or you are placing unrealistic expectations on your friends, family or work peers for their social or corporate involvement, it may be time to reflect on your motives behind your desire to help others.

Inspiring Initiative. Inspiring others to be socially responsible can create an overall feeling of meaning and charity in the lives of others while fueling your passion for contributing towards the greater good.

- Leverage your passion for causes you care about by reaching out to your friends and family for help.
- Brainstorm several activities that you, family and friends can engage in to help at least one of these causes.
- Identify a plan, specific roles for each person and a timeframe for these activities.

### Balancing Your El

This section compares Social Responsibility with Self-Actualization, Interpersonal Relationships, and Empathy, The subscale that differs the most from Social Responsibility is Empathy. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

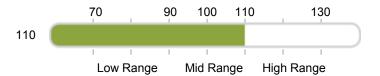

### Social Responsibility(115) Empathy(91)

Your Social Responsibility is higher than your Empathy. These components work best together when you put yourself in the other person's shoes to understand what is truly needed from their perspective. It is best to listen to the needs and concerns of others before choosing the best way to help them or work with them.

# Problem Solving

Problem Solving find solutions when emotions are involved

### What Your Score Means

Problem Solving is not about the quality of your solutions, but rather at how effectively you use your emotions in the process of solving a problem. Lisa, this is an area of emotional intelligence that you use extensively; you tackle problems head on without being overwhelmed or distracted by your emotions. Your approach to problem solving is likely logical, uninterrupted, and involves gathering information before drawing a conclusion. Your result indicates:

- you see emotional information as playing a pivotal role but are not sidetracked by it.
- you work through the many steps of solving a problem without being emotionally distracted.
- you tend to stick with a problem until a solution is reached.

### **Impact at Work**

**Emotional Implications.** You are able to maintain a focused demeanor as you generate solutions to many types of problems. However, be aware that you may appear too removed from the gravity of the situation if you "turn off" your emotions in order to arrive at an objective decision. You still want to appear emotionally invested in the decisions you make—you just aren't allowing your emotions to derail you from making those decisions.

**Social and Behavioral Implications.** You frequently engage in effective problem-solving strategies, especially when emotions enter the picture. Your level of awareness, persistence, and decisiveness speaks to your level of understanding of how emotions play a role in the problem-solving process. Although you rarely let your emotions derail your problem solving, you do run the risk of being overly decisive when a solution isn't readily available, or putting your emotions so far aside that your solutions are seen as cold and impersonal.

#### **Strategies for Action**

**Seek Understanding First.** If you find yourself quick to jump into problem-solving mode, you might start implementing solutions without fully surveying the situation.

- Begin by explaining your interpretation of a problem to at least two people, one who is connected closely to the problem and the other who is a neutral third party.
- Don't ask for solutions; present your summary of the situation and have them ask clarifying questions if needed.
- If there's a question to which you do not know the answer, that's a sign that you need greater understanding of the problem before you begin to solve it.

*In the Mood.* Emotions play different roles in the decision-making process. Learning ways in which you can generate both positive and negative emotions can help you to focus on the task at hand.

- Positive emotions help you stay open to ideas and brainstorm creative solutions. Identify ways to generate a positive mood to help you with the brainstorming phase of problem solving (e.g., listen to music, talk to a friend).
- Negative emotions help you concentrate on the details or analyze the costs associated with each solution. Identify ways to generate a mood that can help you with the analytical phase of problem solving.

### Balancing Your El

This section compares Problem Solving with Flexibility, Reality Testing, and Emotional Self-Awareness. The subscale that differs the most from Problem Solving is Flexibility. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

Problem Solving(110) 

► Flexibility(84)

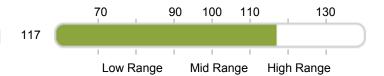

Your Problem Solving is higher than your Flexibility. Balancing these components often involves considering different solutions to a problem. Use solutions that you know from experience will work, but be receptive to new approaches when they may offer a more optimal solution. Remember to maintain a flexible stance throughout the brainstorming process to help generate as many solutions as possible.

**翼MHS** 

# Reality Testing

Reality Testing objective; see things as they really are

### What Your Score Means

Reality Testing—"being grounded" or "tuned into the situation"—means things for what they really are. In business, this includes accurately sizing up the environment, resources, and future trends in order to set realistic plans/goals. Lisa, your results indicate that you have the ability to remain objective. By keeping your personal biases at bay, you likely make trusted and sensible decisions that others can buy into. Your result suggests:

- you are very unlikely to misinterpret critical information or allow emotions to color reality.
- you are keenly aware of your own strengths and weaknesses.
- you are attuned to your immediate environment and attentive to the task at hand.

### **Impact at Work**

Emotional Implications. Your ability to see most situations objectively may lead you to make very black and white conclusions: something is right or it is wrong, there are no shades of grey. Your emotions can also appear black and white: either you are angry or you aren't. For example, when an event triggers a slight emotion in others, you may remain emotionally neutral as you believe emotions cloud your assessment of the event.

Social and Behavioral Implications. Staying grounded, objective, and realistic is essential for the strategic and tactical elements of leadership, from accurately matching a five-year strategic plan within the forecasted economy to creating daily production quotas. Because you frequently see situations as they really are (and not as you wish them to be), your team likely turns to you for the hard facts when it comes to decision making and goal setting. As a result, you are likely to find yourself setting and pursuing meaningful and achievable goals. Be aware, however, of when your objectivity gets in the way of your creativity and willingness to set stretch goals.

#### **Strategies for Action**

Gut Checks. Emotions provide us with information about an event. If you ignore them completely, you are missing out on crucial data that objective analysis cannot provide.

- Try a few "gut checks" throughout your day. Reflect on how you felt about a discussion, calling a customer, making a decision, etc.
- Gut checks are particularly important for large decisions or meetings where you usually allow objective data (e.g., a 10 to 4 vote in favor of pulling the project) to take precedence over what your emotions tell you (e.g., Karen was furious that her project was cut).

Put your Realism to Work. You are likely to notice when personal bias is affecting your performance or your team's performance.

- Leverage this strength by using objective processes to facilitate the group's productivity (e.g., SWOT analysis, strategic-planning techniques) when you notice progress becoming sidetracked by personal agendas or unrealistic views of the situation.
- Research some facilitation or meeting management techniques to create a more productive mindset for your team, where the focus is not on exploring personal speculations but rather on accomplishing realistic objectives in each meeting.

### Balancing Your El

This section compares Reality Testing with Emotional Self-Awareness. Self-Regard, and Problem Solving. The subscale that differs the most from Reality Testing is Self-Regard. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

Reality Testing(117) Self-Regard(102)

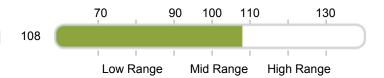

Your Reality Testing is higher than your Self-Regard. To align these components, set meaningful but attainable goals and base your self-assessment on the accomplishment of these goals. The use of objective, supportive feedback can be helpful.

# Impulse Control

Impulse Control resist or delay impulse to act

### What Your Score Means

Impulse control involves understanding the appropriate times and ways to act on emotions and impulses, and the importance of thinking before acting. Lisa, your result shows someone who is generally able to resist or delay impulses to act. Your stable nature helps to put people at ease; coworkers will feel that they can predict your behavior and will open communication channels with you. Your result may indicate a tendency to:

- be deliberate and apt to survey a situation before responding.
- control your emotions and impulses to act.
- be considerate of sharing "airspace", ensuring everyone has a chance to speak.
- be somewhat impulsive under times of stress or pressure.

#### **Impact at Work**

Emotional Implications. Your emotions are usually expected visitors: you experience them, learn from them, and then take action based on this emotional knowledge. This deliberate experience of emotions prevents you from acting erratically when an emotion presents itself.

Social and Behavioral Implications. Your ability to remain focused, delay temptation, and generally avoid making rash decisions has tremendous interpersonal and professional implications. Leadership requires flexibility, but it is an astute focus and deliberate planning that results in corporate buy-in. You are likely respected for your ability to stay the course and think before you act. There is still room to improve your impulsivity, particularly in times of stress or extreme temptation. In such instances you may find it hard to resist impulses to act which may lead to rash decisions or behavior you later regret.

### **Strategies for Action**

Impulse Inventory. There is still room for you to grow your understanding of what types of situations cause you to be impulsive.

- Conduct an inventory of what makes you impatient or impulsive. Think of the last couple of weeks of work—what reactions did you have that you wish you could take back?
- Write a list of what triggered these regrettable moments (e.g., stress, being caught off guard, team conflict). Being aware of specific triggers will help you plan to avoid them or practice your emotional response before they happen.

Learning from Regret. Rewriting a situation where you acted impulsively can help you see the positive effects of deliberate, contemplative action.

- For a situation or decision where you acted rashly, try to identify the emotion you were experiencing at the time. Was it frustration, anger, hopelessness?
- If you could rewrite the situation, what would you have done differently? How could you have exercised more control?
- Use this example of how you wished you had behaved as a goal. Try to demonstrate this behavior in the next two weeks, and make note of any positive effects your more controlled behavior had on yourself and those around you.

### Balancing Your El

This section compares Impulse Control with Flexibility. Stress Tolerance, and Assertiveness. The subscale that differs the most from Impulse Control is Flexibility. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

Impulse Control(108) **○** Flexibility(84)

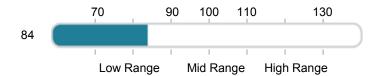

Your Impulse Control is higher than your Flexibility. These facets work most effectively together when you can embrace change, while being in control of your impulses and temptations. Good impulse control can alleviate susceptibility to impetuous change, but should not inhibit you from embracing change that is well planned and positive.

# Flexibility

Flexibility adapting emotions, thoughts and behaviors

### What Your Score Means

Flexibility requires that you be able to modify your thoughts, emotions, and behaviors in response to change. Lisa, more often than not, you appear to be rigid in the way you approach work and life in general. You likely thrive in environments with strict guidelines to follow and stable priorities. However, most workplaces today are in a dynamic and rapid state of change. This may be an area to strengthen as your result indicates:

- an unwillingness to change the way you work (e.g., how you store your emails, managing customer accounts, who you report to, moving from one project to another).
- that you feel uneasy or nervous about change.
- your view of change is: "If it ain't broke don't fix it!"
- you approach organizational changes with trepidation.

### **Impact at Work**

**Emotional Implications.** When people are less flexible they are usually allowing their emotions to have a bigger voice than their objective reasoning. Being flexible is about making a choice—do I keep doing the same thing, or do I change? Be aware of when your emotions take over this decision, for instance when anger or frustration convinces you that your old way of doing things is just fine and change isn't necessary.

**Social and Behavioral Implications.** You may have difficulty adapting your emotions, thoughts, and behaviors to changing conditions in your workplace. As a result, your colleagues may perceive you as rigid and unwilling to change, which may result in missed opportunities for leadership and becoming antiquated in your area of expertise. While others might tackle a new idea, product, or strategy with gusto, you may find yourself overwhelmed, scared, or worried about adjusting to the change, and thereby fall behind the crowd of change supporters.

### **Strategies for Action**

Emotion Analysis. If you find yourself resisting change, write down what emotions accompany your hesitation.

- For each emotion, use your self-awareness to identify the reason you are feeling this way (e.g., your fear of change comes from the possibility of making mistakes).
- Work through your list of emotions and their causes to find tangible evidence to support or invalidate your emotion. For example, if you are afraid to make a mistake, start gathering all the possible resources and expert advice to help keep your fear at bay when tackling this new challenge.

**Brainstorming.** Brainstorming, especially when performed in a group context, will enable you to take on new perspectives and harvest these options for future contexts. Before you begin brainstorming options, bring about a positive mood in yourself or in the group. Positive emotions help to facilitate creativity and will allow you to remain open to any ideas brought forth.

# Balancing Your El

This section compares Flexibility with Problem Solving, Independence, and Impulse Control. The subscale that differs the most from Flexibility is Independence. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

### Flexibility(84) Independence(113)

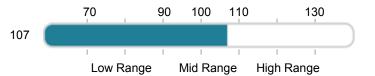

Your Flexibility is lower than your Independence. Balancing these components of El can be tricky since the goal is to be open and responsive to change, but you want to maintain an ability to act and think independently. The key is to be willing to change while standing firm when it is important for you to do so. Often you can leverage your independence by implementing strategies to help execute change brought on by others.

### Stress Tolerance

Stress Tolerance coping with stressful situations

### What Your Score Means

Stress Tolerance is the ability to cope with and respond effectively to stress and mounting pressure. Lisa, your result indicates that you are armed to withstand stress with a repertoire of effective coping strategies. You are able to manage your emotions, remain composed, and maintain your performance, even when times get rough. Although you may not handle all stressful conditions well, you have the underlying belief that you can control your reaction to stress. Some characteristics of your result are:

- you can maintain a level of work performance even under mounting pressure or competition.
- you actively cope with stress without letting your emotions take over.
- weaknesses in other areas of EI may be more apparent during times of stress.

### **Impact at Work**

Emotional Implications. Although you can keep control of your emotions during times of stress, there is the possibility that you do not leverage and use your emotions. Rather than subduing your emotions, remember to use them. The emotion of happiness can help you come up with creative solutions to your stressful situation.

Social and Behavioral Implications. Your ability to tolerate stress and exert some influence over the situation is likely to appear calming and even inspiring to your colleagues. Your ability to openly cope with your challenges and even bring others along with you is a sign of tenacious leadership, a quality that is imperative given the full schedules we all work with. Although mounting pressure can cause you to lose your composure, for the most part others can predict your calm and focused demeanor and as a result are likely to openly share information with you.

### **Strategies for Action**

Building your Coping Strategies Bank. There are several effective behavioral strategies that can you help you better cope with daily stressors and improve your overall stress tolerance. Some of these strategies are so discreet you can use them in the office to address stress as soon as it starts:

- deep breathing, belly breathing, visualization exercises
- progressive muscle relaxation, acupressure
- yoga, tai chi, meditation

Worry-Free Zone. Declare a worry-free zone somewhere in your workplace.

- Move away from your desk and spend five minutes in a different location (e.g., cafeteria, outside) where the only rule is: No thinking about the thing that is causing you stress.
- Allow your mind to cool down and to become clear again. Only then are you in the best position to leverage your emotions in order to respond appropriately to the stress.

### Balancing Your El

This section compares Stress Tolerance with Problem Solving, Flexibility, and Interpersonal Relationships, The subscale that differs the most from Stress Tolerance is Flexibility. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

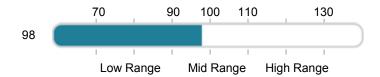

Stress Tolerance(107) Flexibility(84)

Your Stress Tolerance is higher than your Flexibility. Balancing these aspects of EI involves using coping mechanisms to deal with stressful situations while they are occuring. It also means changing tactics if the stressful situation has not been overcome. Waiting out stressful events may work but is not typically the best strategy. To facilitate a more active approach to dealing with stress, identify one small thing that could be changed about the stressful situation and push to change it. However, even the most stress tolerant people need to adjust to their surroundings to avoid burnout. Copyright  $\ensuremath{\texttt{@}}$  2011 Multi-Health Systems Inc. All rights reserved.

# **Optimism**

Optimism positive attitude and outlook on life

### What Your Score Means

Optimism, the ability to remain positive despite setbacks, often differentiates between "star performers" and others in the workplace. It permeates almost every application of EI, from helping you persevere to enabling you to view change as a good thing. Lisa, your result shows a person who is normally optimistic, preferring to see the world in a positive light. A result in the average range also indicates that you are not so overly optimistic that you are blind or naïve to the realities of life. Some characteristics of your result are:

- you tend to see the world with a "glass half-full" approach.
- you are hopeful about the future.
- you are energized by setbacks and obstacles, fuelled to overcome challenges in life.

### **Impact at Work**

**Emotional Implications.** Optimistic people experience a range of emotions. You are not so optimistic that you ignore fear, nor are you so pessimistic that you ignore happiness. To your team, this grounded optimism is likely contagious; others will see your hopeful vision of the future, and with realistic plans they will see that this vision is attainable.

**Social and Behavioral Implications.** Hopefulness and resilience are attributes of effective leaders. You are likely able to see opportunities and possibilities that others may overlook or simply reject for being too difficult, too time-consuming, or outside of the organization's current comfort level. Your goals (and if applicable, the goals you set for others) are likely to reflect your optimistic approach to work; you see the possibilities and set stretch targets that help you strive for the best. There is still room to increase your level of optimism, as certain instances at work likely cause you to be more negative than you wish to be.

### **Strategies for Action**

Pessimistic Moments. If there are times when you feel less optimistic, take note of when these occur.

- Identify the trigger for your pessimism. Is it when timelines are tight? Are you in a leadership role and skeptical of others' capabilities?
- Debate the validity of this pessimism. Look to the past to confirm whether similar successful or unsuccessful situations have occurred.
- If your pessimism is warranted, perhaps contingency plans for this risk should be considered.

**Reevaluate.** When you are faced with a challenge and your normally optimistic demeanor wavers, you may need to reevaluate your goals in order to visualize a successful outcome.

- Adjust your tasks and goals into more manageable and attainable segments. For larger, more daunting projects, try to break them into five to seven smaller steps.
- This does not mean that you should oversimplify or trivialize what is needed, but it does help to become more solution-focused at smaller intervals than to be burdened by a single overwhelming goal.
- For each smaller step, describe what you visualize success to be. Keep focused on these smaller outcomes to help bring your optimism back in line.

### Balancing Your El

This section compares Optimism with Self-Regard, Interpersonal Relationships, and Reality Testing. The subscale that differs the most from Optimism is Reality Testing. Improving the interplay between these subscales is likely to significantly impact your overall emotional intelligence.

Optimism(98) Reality Testing(117)

Your Optimism is lower than your Reality Testing. To balance these components, use objective information and facts to inform, strategize, and inspire dreams and visions for the future. Although there are times when you must change course entirely, don't give up if there is still a reasonable chance to succeed. Consider all possible courses of action before revising goals.

# Well-Being Indicator

Happiness satisfied with life; content

#### 100 110 130 Low Range Mid Range High Range

### How to Use this Page

Happiness includes feelings of satisfaction, contentment and the ability to enjoy the many aspects of one's life. It is different than the other El abilities in that Happiness both contributes to, and is a product of, emotional intelligence. As such, your result in Happiness is like an indicator of your emotional health and well-being.

Your Happiness result is shown below, linked to your results on the four subscales most often associated with Happiness.

Because Happiness is so interconnected with all El abilities, you may find further development opportunities if you explore how the remaining subscales contribute to your level of Happiness, and vice versa.

### **Happiness**

109

Lisa, your result in Happiness suggests that more often than not you feel satisfied with your life, and generally enjoy the company of others and the work you do. You may:

- have fun at both work and play when participating in activities you enjoy.
- be seen by coworkers as likeable and pleasant to be around.
- have to occasionally manage your discontentment with certain aspects of your life.

Although you have no low scores in the four subscales typically tied to Happiness, you should examine other lower scoring subscales (Emotional Expression and Flexibility) which may be holding you back from experiencing greater happiness. Are there goals you can set that are related to these areas?

### Self-Regard (102)

Happiness is a by-product of believing in oneself and living according to your own values. Although you have good selfregard, there are times when you may doubt yourself, creating feelings of unhappiness. Strengthening selfregard may help to enhance life satisfaction and wellbeing.

- Reflect on past accomplishments to identify skills that enabled you to be successful.
- If you could improve one facet of your life, what would it be? Why?

### Optimism (98)

In the face of setback and disappointment, the ability to recover and claim a happy state is contingent on one's level of optimism. Your results suggest you are optimistic and hopeful most of the time, but perhaps you could use this outlook more frequently so that your happiness becomes even more personal, permanent and justifiable.

- When are you the least optimistic? How could your outlook be improved in these situations?
- When faced with a new challenge, how do you typically feel? List your emotions and think about why you feel this way.

### **Interpersonal Relationships** (97)

Well-developed relationships serve as a buffer from the negative effects of life's daily demands. Your result suggests that your relationships are fulfilling for the most part, but there may be times when you need more encouragement and support from those around you.

- What causes struggles in your relationships and what could make things better?
- What are the most desirable attributes of the people you spend time with?

### **Self-Actualization** (127)

Happiness comes from a willingness to learn and grow on a journey aligned with your values. Your level of selfmotivation and feelings of an enriched life ultimately drive your life achievements and overall happiness.

 Are there areas in your work or personal life that you would like to further develop? If so, how can these endeavors mesh with your current lifestyle?

# Action Plan

The steps you take towards achieving your El goals will determine whether or not success is realized. Use this step-by-step activity plan to help guide you closer to your goals. Remember to use the SMART goal setting criteria for each goal.

Write down up to three El skills or behaviors that you would like to further develop (e.g., "reflective listening" to build empathy, or "recognizing how my body reacts to stress" to raise emotional self-awareness). The SMART goals that you outline in the template should help to strengthen these EI skills and behaviors.

- 1.
- 2.
- 3.

Write down up to three overall qualities that you would like to have (e.g., integrity, providing clear leadership, team player, clear communicator). In some way the goals you outline in this action plan should help you achieve the overall qualities you identified.

- 1.
- 2.
- 3.

Transfer your SMART goals into the action plan template below.

SPECIFIC
MEASURABLE
ACTION-ORIENTED
REALISTIC
TIMELY

SMART Goal	Time Frame	Benefits	Measure of Success	Support and Resources Needed	Potential Barriers
Listen to others	In team meetings Starting from today	Other people will listen to me I will get to hear everyone's views	Feedback from the team to say that I am listening to them more Take actions that other people have suggested	From the team to give me honest feedback	Time — often do not have time to listen to views but just need to give instructions. If this is the case need to tell people at the beginning of the meeting

I commit to this action plan \_\_\_ (signature)

# El Development Commitment

A Development Commitment is a tool to help hold you accountable for accomplishing the goals outlined in your action plan. As we all too often know, our plans for personal growth and development often fall by the wayside when we get engrossed in work and our

organization's demands win the competition for our time and attention. By outlining your objectives here and leaving a copy with your coach you are increasingly more accountable to reach your personal goals.

My Personal Development Goal	S			
My action plan includes the following g	goals:	Due Date		
1.				
2.				
3.				
4.
